Supplemental and Corrected Information to 2A Submittal  
Williams Production RMT Company  
**RGU 13-24-198 Pad, Document #1712264**

Facilities Section 5:

As discussed previously, there is no need to include a list of temporary equipment.

Cultural Section 9:

The nearest building is our Sagebrush Compressor facility to the ENE, which we measured at 942'. We may have measured this distance slightly differently without proper scale adjustment, and accept the COGCC distance of 1229'. The nearest above ground utility is a White River Electric power line running approx. E/W on the north side of CR 83 in Section 35, T1S, R98W, we do not have an above ground power line at the Sagebrush Compressor. We stand by our measured distance of 41,184'. Williams has obtained a copy of White River Electric's facilities in the region and would be happy to supply this map to the COGCC for inclusion of that data in the website.

Current Land Use Section 10 and Future Land Use Section 11:

The correct notation for both sections is Non-Crop Land, Rangeland. Please delete or mark out the notations for Crop Land, Dry Land.

Water Resources Section 14:

We believe the projected depth to groundwater is accurate after an adjustment is made for the elevation difference of the permitted water well and the proposed SWD pad site.

Location Drawing:

Please see attached revised Location Drawing indicating the proposed location of the two water lines, separators and all proposed water tankage.
