RECLAMATION

INTERIM RECLAMATION

☐ Interim Reclamation will commence approximately _____
Per Rule 1003.e.(3) operator shall submit Sundry Notice reporting interim reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Interim reclamation complete, site ready for inspection.
Per Rule 1003.e(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

Field inspection will be conducted to document Rule 1003.e. compliance

FINAL RECLAMATION

☐ Final Reclamation will commence approximately _____
Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

Field inspection will be conducted to document Rule 1004.c. compliance

COMMENTS:

ENGINEERING and ENVIRONMENTAL Work

Notice of Intent: Request for Extended Bradenhead Testing ...

Flow gas to flare / vent to determine extent of possible shallow gas reservoir or bleed off volume / pressure from annulus. Test duration may take up to 1-3 weeks in length.

PLAN

Perform an initial Bleed-Down Diagnostics Test

A diagnostic test that includes pressure bleed-down and subsequent monitoring of pressure build-up, or a similar diagnostic test, is recommended as follows:

- The 7" x 9.625" annulus pressure will be bled down through a double valve arrangement, with the inside valve being fully open.
- Any liquids released will be contained.
- Samples of liquid and gas may be captured for comparative analysis, if required.
- The 4.5" x 7" annulus will be monitored during bleed-down and build-up.

Annulus pressure will be relieved by connecting to a flare / vent system.

Determining Annular Pressure Threshold

Based on API RP90

Surface Casing Shoe Depth = 865 ft

APTsc, psi (assume lowest value method)

Assuming a 0.5 psi/ft gradient at shoe = 433 psi

Assuming 30% of maximum internal yield pressure sc = 0.3(5750psi) = 1725 psi

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million)

Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
