697-09-61 (Conn Camp)
2nd Quarter 2014 Sampling Summary

6/13/2014

1.0 Location:

OXY USA WTP LP (Operator #66571)
760 Horizon Dr., Ste. 101
Grand Junction, CO 81506

697-09-61 (Location ID 335889)
T6S, R97W, Sec9, SWSE
Garfield County, Colorado

2.0 Overview:

This report summarizes the second quarter 2014 monitoring event of the June 2008 OXY USA WTP LP's (OXY) Cascade Creek 697-09-61 well pad release; refer to Colorado Oil and Gas Conservation Commission (COGCC) Document #200191192 and Remediation project #4620. The well pad is situated east of an unnamed tributary of Cascade Canyon, and the release extended to the drainage near a rancher's cabin (Conn Camp) located along the west unnamed creek. The well pad, Conn Camp, and the area upon which the release occurred and surfaced are located on property owned by OXY.

Second quarter samples were collected on May 22, 2014. Laboratory analyses of these samples indicate that concentrations of benzene, toluene, ethylbenzene, and xylene (BTEX) were all found to be below the COGCC's table 910-1 allowable concentrations. Gasoline range organic compounds (GRO) was not detected during this event.

3.0 Water Monitoring and Results:

Quarterly sampling was conducted on May 22, 2014 at three of the approved sampling locations; North Trench (sampling point #2), S1 Trench (sampling point #7), and the downstream Point-of-Compliance (aka "POC", sampling point #10). The Latham Spring Pond (sampling point #32) location was dry during the sampling event. Conditions during sampling events were clear and warm.

No exceedances of BTEX were identified during this event. A summary of analytical results for the last five quarters of the listed sampling points are shown in Table 1.

A summary of all sampling locations for the history of the release are presented in the attached Comprehensive Laboratory Data Summary by Location table and attached to this report. Graphical summaries of BTEX concentrations for sampling locations #2, #7, #10, and #32 are summarized and attached to this report. The four sample locations are identified on the attached figure.

4.0 Quality Control:

A formal sampling and analyses plan has not been prepared for this event. OXY has collected duplicate and split samples for quality control (QC) purposes to determine the adequacy of field collection and laboratory methods. Duplicate and split samples were collected at sampling points #2, #7, and #10. The duplicate samples were analyzed and the split samples were held by the alternate laboratory and were not analyzed.

All duplicates samples collected and analyzed during the 2nd Quarter 2014 event were shown to be "non detect" for benzene, toluene, ethylbenzene and GRO. Detections of xylene were identified in the quarterly and duplicate samples at nearly the same concentration. No data qualifiers were identified for any of the quarter or duplicate samples during analyses.

Table 1. Summary of 697-09-61 Monitoring Results from 2nd Quarter 2013 through 2nd Quarter 2014

Location # / Date	Benzene (MCL = 5.0 µg/L)	Toluene (MCL = 1000 µg/L)	Ethylbenzene (MCL = 700 µg/L)	Xylenes (MCL = 10000 µg/L)	GRO (MCL = Detection)	TDS (MCL = 487 ppm)*

Notes: µg/L – micrograms per liter

Q1/Q2/Q3/Q4 – indicates normal quarterly sample

MCL – Maximum concentration level (µg/L)

ppm – parts per million

NA – not analyzed.

GRO – gasoline range organics

TDS – total dissolved solids

D – indicates duplicate sample analyzed by QTR laboratory

S – indicates duplicate sample analyzed by separate laboratory

* – 1.25 × 390 ppm detected at location #12 on February 12, 2009

5.0 Conclusions:

No exceedances of benzene, toluene, ethyl-benzene, or xylene were identified during the 1st Quarter 2014 sampling event. GRO is used as a comparative indicator for the presence of low-fraction petroleum hydrocarbons and of remediation progress at the site and was not detected in any samples during this event.

Separate graphs of analytical results from the past year (five sampling events) and for the lifetime of the event (June 2008 through May 2014) are attached to this report. A rise in laboratory analytical method detection limits has occurred over the past two years (1st Quarter 2012 through May 2014). Analytical detection limits denoted with a less-than sign (<) in Table 1 are below allowable MCLs, but when graphed at the detection limit appears to show an upward trend over the past two years since analytical sensitivity decreased. The overall trend over the last 5 quarters, the last time analytical sensitivity was decreased, shows a level trend for the analytes of concern. The decreased laboratory sensitivity in analytical methods has been noted to contribute to the upward graphical trend, but is unlikely to be indicative of an increase of BTEX constituents at those locations with BTEX concentrations below the MCLs. BTEX concentrations are in a downward overall trend since the event occurred in June 2008.

A Form 4 Sundry Notice of Intent for Environmental Work was submitted to COGCC on February 7, 2014. That notice requests conditional closure of Remediation Project #4620 following four consecutive quarters of monitoring without BTEX exceedances, two seasonal runoff monitoring events in each of the typical subsequent runoff periods (summer 2014 and summer 2015), removal of the HESCO barriers, reclamation of the seep trenches, HESCO barrier soil disposal or re-use, contingency seep monitoring, and incorporation of the event area into the existing stormwater management plan. As of this report date approval for these actions has not been received.

To date, five consecutive quarters of below MCL BTEX monitoring has been achieved and OXY intends to begin the reclamation process by removing the HESCO barriers, characterizing the HESCO barrier fill soil to Table 910-1 standards, installing PVC piping to capture seep water, and re-contouring the trench areas for reseeding.

Notes: µg/L - micrograms per liter

MCL - maximum contaminant level

GRO - gasoline range organics

TDS - total dissolved solids

ppm - parts per million

* - the highest number within the range is the MCL

** - 1.25 x background measurement from location #12 on 2/12/09 (390 ppm)

D - Indicates duplicate sample

S - Indicates Split Sample

9/30/2010	8.04	0.594	65.6	297		
10/27/2010	7.92	0.558	45.2	280		
Core Creek Seep (#39-seep)						
4/30/2009	7.57	0.625	48.6	345		

Notes:

- EC - Electroconductivity mg/L - milligrams per liter
- mmhos - millimhos ORP - Oxidation reduction potential
- TDS - total dissolved solids NA - Indicates field instrument malfunction
- ppt - parts per thousand Blank - Indicates no readings were taken
- DO - Dissolved oxygen
