

Sarah Freeman  
 Permit/Completion  
 Colorado Oil and Gas Conservation Commission  
 1120 Lincoln Street, Suite 801  
 Denver, CO 80203

Dear Ms. Freeman:

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) has performed a preliminary review of the new wells proposed by Caerus Oil and Gas LLC and the well location information provided by the Colorado Oil and Gas Conservation Commission (COGCC). The table below indicates the planned surface and bottom hole locations for gas wells to be drilled near the Rulison, Colorado, Site. LM reviewed the location information and determined that all of the wells are within section 9,10 and 11 of the COGCC Tier I and Tier II sampling areas.

**Abbreviations:**

API =American Petroleum Institute/ The API Well Numbers are assigned by the appropriate state or federal regulatory agency.

All surface drill pads locations are within NWSW Sec 26 7S 94, with bottom hole locations within Section 26 and 35. The proposed Battlement Mesa well location 44A-26-795 (API# 05-045) would be the closest to the Rulison site; that bottom hole location is approximately 0.51 mile from the site.

At this time, LM is not requesting any additional information but requests that COGCC place general language, requiring that the company accommodate DOE sampling requests in the

future, in the permit. LM will continue to review the proposed locations and subsurface orientations of the proposed drilling to look for any potential problems involving future LM sampling at the Rulison site.

Thank you for the opportunity to comment on these well permit applications. Please contact me at (970) 248-6034 if you have any questions.

Sincerely,

Art Kleinrath
