SUNDRY NOTICE

Submit a signed original. This form is to be used for general, technical and environmental sundry information. For proposed or completed operations, describe in full in Comments or provide as an attachment. Identify Well by API Number; identify Oil and Gas Location by Location ID Number; identify other Facility by Facility ID Number.

| Intent to Recomplete (Form 2 also required) Request to Vent or Flare E&P Waste Mangement Plan |
| Change Drilling Plan Repair Well Beneficial Reuse of E&P Waste |
| Gross Interval Change Rule 502 variance requested. Must provide detailed info regarding request. |
| ▼ Other Temp Tanks Status Update/Change of Remediation Plans for Spills and Releases |
| COMMENTS: |
| The C-24M Pad will be used to support well stimulation activities for approximately 6 months at the C-24O Pad. A maximum of 120 tanks will be temporarily staged at the C-24M Pad. The temporary tanks will be placed within the current pad disturbance boundary and no additional surface disturbance is required. This location is a constructed and producing location on Ursa owned surface. Please see the attached as-built drawing. |
| H2S REPORTING |
| Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample |
| that is submitted for Laboratory Analysis. |
| Gas Analysis Report must be attached. |
| H2S Concentration: in ppm (parts per million) Date of Measurement or Sample Collection |
| Description of Sample Point: |
| Absolute Open Flow Potential in CFPD (cubic feet per day) |
| Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.): |
| |
| Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the |
| public could reasonably be expected to frequent: |
| Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: |

CONDITIONS OF APPROVAL, IF ANY:

COA Type Description

Temporary Surface Pipelines or Permanent Surface/Buried Pipelines: The following conditions of approval (COAs) will apply to the Form 4 since temporary surface (poly/steel) and/or buried (poly or steel) pipelines are being used during completion operations at the Boies Ranch C-24O Pad and nearby Boies Ranch C-24M Pad, B-19P Pad, and the Boies Ranch B-19N Pad and along associated temporary frac lines between the four locations:

PLN 88 - Operator shall submitted via separate Form 4 Sundry Notice, a drawing showing the locations of all Temporary Surface and/or Permanent Buried Flowlines that will be used during the hydraulic stimulation of the wells on the Boies Ranch C-240 Pad.

COA 45 - Operator shall pressure test pipelines (flowlines from wellheads to separators to tanks; pipelines from onsite separators to offsite storage tanks, and any temporary surface lines used for hydraulic stimulation and/or flowback operations) in accordance with Rule 1101.e.(1) prior to putting into initial service any temporary surface or permanent buried pipelines and following any reconfiguration of the pipeline network.

COA 48 - Operator must implement best management practices to contain any unintentional release of fluids along all portions of the surface pipeline route where temporary pumps and other necessary equipment are located.

COA 49 - Operator must routinely inspect the entire length of the surface pipeline to ensure integrity. Operator shall conduct daily inspections of surface poly pipeline routes for leaks during active transfer of fluids. Inspections shall be conducted by viewing the length of the pipeline; operator will endeavor to minimize surface disturbance during pipeline monitoring. The operator shall maintain records of inspections, findings and repairs, if necessary, for the life of the pipelines.

COA 54 - Operator must ensure appropriate secondary containment for volume of fluids that may be released before pump shut down from the surface pipeline at all stream, intermittent stream, ditch, and drainage crossings. Catchment basins, if needed, should be sized to contain the volume between pump stations or between the nearest pump station and the frac pad being used for this well pad location. Pump stations along the surface poly or steel pipeline route will be continuously monitored when operating in order to swiftly respond to such a failure.

COA 55 - Operator will utilize, to the extent practical, all existing access and other public roads, and/or existing pipeline right-of-ways, when placing/routing the surface pipelines. This will reduce surface disturbance and fragmentation of wildlife habitat in the area.
