General Comment:Spill Reinspection

On 3/5/2020 produced water was running from an animal hole in the pit berms on the south end of the pit, into grassy areas east and west, under a barbed wire fence, down a gully and into a pond in the pasture. Produced water was still running out the animal hole on 3/10/2020 and there was no evidence of remedial work being done to stop it. COGCC EPS and operator were contacted by inspector and a contractor was to be in location today, 3/10/2020 to fix animal holes in the berms and stop the water from leaking from the produced water pit. Operator said that the produced water going into the west pond was for livestock. A Form 19I was submitted. See attached photos.
