Hello Diane,

We have had sustained surface casing pressure on the UPRR 38 PA O TRUE 2 during P&A operations that we have not been able to eliminate with a squeeze. Since we have run out of room to squeeze I am requesting approval to section mill our casing from 1650'-1670' and pump a 15 sx balance plug across that interval to attempt to eliminate surface casing pressure.

Our surface casing shoe is at 778' and deepest water well within 1 mile is at 640'. Please let me know if you have any questions.

Thanks,

Trey Sloan
