General Comment:

On 5/27/2020 Catherine Roy conducted a reclamation and stormwater inspection. During this inspection the following compliance issues were observed:

-Cropland revegetation does not meet 1004 reclamation standards.

-Conduct soil sampling to determine the likely cause of poor revegetation. As described below, results shall be submitted with a remediation/reclamation plan for the project area.

-Submit a plan to remediate and reclaim the project area. Plan needs to include at a minimum, the following:

- Copies of any soil testing results from testing that was previously conducted at the location.
- Soil sample results from 2020 soil sampling in response to this inspection.
- A detailed soil remediation and reclamation plan based on soil sampling results.
- Schedule to conduct soil remediation activities and reclamation activities in coordination with surface owner and crop timing at all phases of remediation/reclamation.
- A map showing soil sampling locations and remediation areas.

-Plan and sampling results need to be submitted by 6/30/2020.

See below, and attached photos for additional detail.

Comment: Vegetation within the majority of the project area is noticeably sparse, stunted, and more weedy than surrounding alfalfa crop field. Alfalfa plants measured on average 6 to 10 inches tall within the project area. Alfalfa plants outside the project area are approximately 24 to 28 inches tall. Weeds within the project area, such as kochia, sheperd's purse, and foxtail barley were not observed within the reference crop field.

Corrective Action:	<p style="color: red;">-Conduct soil sampling to determine the likely cause of poor revegetation. As described below, results shall be submitted with a remediation/reclamation plan for the project area.</p> <p style="color: red;">-Submit a plan to remediate and reclaim the project area.
