Date: 8/3/2020

Photo 1. View of the project area from the southeastern corner facing center.

Photo 2. View of the eastern project area from the southeastern corner facing northward. Revegetation is progressing with smooth brome, crested wheatgrass, western wheatgrass, and rubber rabbitbrush.

Photo 3. View of the southern project area from the southeastern corner facing northward.

Photo 4. View of erosional channel approximately 2 feet wide and 1.5 feet deep, starting along the southwestern edge and flowing through the southern interim reclamation area.

Photo 5. Another view of erosional channel in the southern project area. Cobble BMPs are not sufficient here and no longer functioning.

Spotted knapweed
appears to be herbicide
treated

08-03-2020

Spotted knapweed
rosette is not herbicide
treated

08-03-2020

Photos 6/7. View of spotted knapweeds, large individuals are herbicide treated (left), smaller rosettes remain untreated (right).

Photo 8. View of reference area vegetation comprised of sagebrush shrubland with understory of blue grama, sand dropseed, and hedgehog cactus.
