UNDETERMINED	SOILS	TBD	Soil Samples/Laboratory Analytical Results

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

This form has been prepared to provide prior notice of the closure and decommissioning of the Ackerson, Ellanora M GU 2 tank battery facility in addition to the partially buried produced water vessel (vessel), as reported in the Form 27 Initial. The facility will be permanently deconstructed. In accordance with COGCC Rule 911.a., soil samples and a groundwater sample (if present) will be collected following facility deconstruction activities to determine if soil and groundwater (if present) meet the concentration levels of COGCC Table 915-1. Field screening of soils will be conducted during facility deconstruction activities.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Following the removal of the facility infrastructure and vessel, discrete grab soil samples will be collected from the site in accordance with COGCC Rule 911.a. The soil samples will be field screened for total volatile organic compounds using a photoionization detector (PID). Soil samples collected following the removal of the vessel, above ground storage tank(s), separator(s), flair or combustors, and meter sheds will be submitted (as applicable) for laboratory analysis in accordance with the COGCC Operator Guidance Rule 911.a.(4). Soil samples that are submitted for laboratory analysis will be run for the full list of analytes for soil in Table 915-1. The proposed soil sampling locations, as defined in the COGCC Operator Guidance Rule 911.a.(4) document, are depicted on Figure 1.

### Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

If groundwater is encountered during excavation activities, a minimum of one grab sample will be collected from each excavation (if present) as soon as practical and submitted for laboratory analysis of the full list of analytes for groundwater in Table 915-1.

### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

If a suspected release is identified and confirmed through soil screening and/or laboratory analysis, soils will be removed and transported to a licensed disposal facility. Disposal records will be kept on file and available upon request.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Potential impacts that meet the criteria in Rule 912.b. will be reported to the Director in accordance with that Rule and a site-specific soil and/or groundwater remediation plan will be developed and submitted to the COGCC via a supplemental Form 27 in accordance with Rule 913. If reportable impacts are not encountered, a supplemental Form 27 requesting closure will be submitted within 45 days following completion of sampling activities. Field screening and applicable laboratory analytical results will be reported in all submittals. E&P waste records of material transported off-site are kept on file and available upon request.
