## **WEED MANAGEMENT PLAN**

K.P. Kauffman Company, Inc.  
Denver, Colorado

## 1. INTRODUCTION

This Weed Management Plan (WMP) has been developed to address K.P. Kauffman Company's (KPK's) weed monitoring and management procedures. The objective of the WMP is to prevent and manage the potential spread of restricted, noxious and invasive weed species along KPK's areas of operations and to reduce or manage weed infestations as a result of operational activities to a level equivalent to that observed in adjacent lands with a similar land use and similar land management.

KPK owns and operates oil and gas wells and their associated tank battery facilities. The WMP addresses weed management practices at these locations. A list of facilities addressed under the WMP has been provided as Attachment A

KPK utilizes an integrated vegetation management approach to carry out specific weed management practices for this plan and to meet the overall objectives of weed management for all KPK facilities. The WMP is based on the weed management elements of identification, treatment options, treatment thresholds, prevention, and monitoring

## 2. LEGAL REQUIREMENTS

State relevant legislation and statutory obligations:

- Colorado Oil and Gas Conservation Commission Rule 606.c. - Oil and Gas Locations will be kept free of all Undesirable Plant Species.

The WMP has been developed to address these requirements.

## 3. WEED MANGEMENT OBJECTIVES

KPK is committed to regular review of all associated facilities. As part of that review, measures will be implemented to meet objectives outlined in the WMP during regular operation and maintenance activities. These measures will incorporate the following:

- Preventing the spread of noxious and invasive plants within and around facilities;
- Addressing substantiated landowner notices or complaints;
- Reducing infestations to a level at or below the level observed in adjacent lands with equivalent or similar land use and land management;
- Considering proactive, preventative and chemical based weed management while conducting O&M activities; and
- Working co-operatively with municipal, provincial, federal representatives, and landowners to actively evaluate and use new weed management techniques and practices to improve the WMP.

## 4. WEED MANGEMENT ELEMENTS

### 4.1. Identification

KPK employees will record and communicate observed weed growth issues at locations, during normal inspections, maintenance and/or monitoring activities.

Appendix B provides a summary of weed species of concern.

### 4.2. Weed Management Options

**Manual and mechanical methods** - control consists of methods that kill or suppress weeds through

physical disruption. Such methods include pulling, digging, disking, ploughing and mowing. The degree of success of various mechanical control methods is dependent on the life cycle of the target weed species.

**Chemical (herbicide) methods** - herbicide application is the least preferred option for the management of weed and invasive species; however, herbicides can provide an effective and time-efficient method of managing weeds. Numerous herbicides are available that provide effective weed control and are selective in that grasses are not injured. Herbicides can be applied by spot spraying to target individual plants, or broadcast spraying to cover an entire area. Only qualified personnel will undertake the application of herbicides on KPK facilities. Herbicide mix for all KPK facilities includes:

- Plainview
- Flagstaff
- Glyphosate
- Surfactant
- Green Dye

Associated herbicide mix SDS can be found in Attachment C.

#### 4.3. Treatment Thresholds

The treatment threshold objective for weeds or invasive species are as follows.

- All weeds must be reduced and maintained at levels, by density and distribution, to equivalent or less than levels on adjacent lands with equivalent or similar land use and land management.
- Weeds must be treated and controlled in compliance with regulations and jurisdictional requirements.
- The priority for managing sites where the threshold has been reached will be determined by the level of risk based on the criteria outlined in Table 1.

Priority	Purpose or Intent
1 High Risk	To stop the spread of invasive plants currently threatening non-infested or highly susceptible sites including cultivated, hay and pasture lands and/or if the site is adjacent to transportation corridors such as roads, railways or waterways.
2 Moderate Risk	To stop the enlargement of sites in less susceptible areas. This includes sites adjacent to lands such as forested lands that have a well-established vegetation cover and are therefore less susceptible to invasive or seed species introduction.
3 Low Risk	To stop the enlargement/contain sites on and adjacent to industrial lands.

TABLE 1 SITE RISK LEVELS

#### 4.4. Prevention

Measures focused on preventing the introduction and spread of weeds is an important component of the WMP. Practical and preventative measures will be incorporated into facility maintenance activities as well as any maintenance activities. Weed treatment at facilities will target restricted and noxious weeds. Further measures to prevent the spread of weeds will be implemented, where warranted.

##### 4.4.1. Facilities and Associated Access Roads

###### *Facility Bare Ground Maintenance*

Appropriate surfacing materials will be used within facilities to minimize the growth of unwanted

vegetation. This includes ensuring surfacing material is of a correct thickness and free of organic material to reduce the establishment of unwanted vegetation. Options will be used for surfacing materials for activities related to maintenance and operations, and for upgrading of existing facilities and access roads including one or a combination of the following:

- Crushed rock/gravel (washed where available); source sites will be visited prior to delivery of crushed rock/gravel to ensure site is acceptable due to the high risk of weed introduction;
- Landscape fabric (geotextile); and
- Asphalt and concrete.

#### *Facility Bare Ground Herbicide*

Application of a bare ground herbicide mixture will be completed at a minimum of 10 feet outside the containment berm for pre-emergent weed control on specified sites. On larger facilities and or sites where all equipment is located on the same pad, herbicides will be applied to the entire pad.

All existing weeds on the application site must be cut to a height of less than 8 inches for the application to be successful and for the warranty to be activated, otherwise Hired Gun cannot guarantee the success rate of the application if the herbicides cannot penetrate the soil through thick vegetation.

#### *Facility Vegetated Ground Maintenance*

- Seeding and maintenance of disturbed areas.
- Ensuring mowing or vegetation maintenance equipment is free of weed seeds or debris.
- Limiting vehicle travel through known weed-infested areas.
- The mowing of access roads. This will accomplish the following:
  - Stop noxious weeds from propagating.
  - Impose stress on perennial noxious weeds so they may be better impacted by herbicide treatments to follow.
  - Allow more herbicide to contact target noxious weeds.
  - Maintain and reduce infested area.

### **4.5. Monitoring**

Monitoring will be conducted in conjunction with other scheduled regular maintenance and operations activities.

## **5. NOTIFICATION**

KPK personnel will report all weed related issues within 48-hours upon discovery. Initial notification may be verbal, with follow-up written notification provided within seven working days.

## **6. RECORDKEEPING**

KPK's WMP requires the following recordkeeping:

- Details of herbicide applications, including dates, timing, personnel, and location.
