475399	OFF- LOCATION FLOWLINE	AC	01/13/2021		-	Wellhead Line 20NESW	EI

General Comment:

This is an environmental inspection. Any corrective actions from previous inspections that have not been addressed are still applicable.

COGCC inspection to witness confirmation sampling of the Paul Heinze #1 Spill ID #479232. Operator stated that they had previously screened the excavation with a PID and that there were no residual impacts.

Prior to initiating the collection of samples COGCC reviewed the Guidance Document 915.e.(2) Soil Sampling and Analysis and the operator adjusted the number of samples collected from their planned five samples (four sidewalls and one base) to 12 (8 sidewall and four base).

Grab base samples were taken within 4 quadrants and in areas most likely to be impacted (Photos 1-4). Base lithology was predominantly weathered claystone with calcareous nodules and veining throughout. Grab sidewall samples to the north, east, and west were taken at areas most likely to be impacted at various depths, adjacent to the pipe, in areas of groundwater seepage, and along fractures in weathered claystone (Photos 5-6, 8-11). Lithology varied between weathered claystone and unconsolidated conglomerate with significant calcareous deposition observed throughout.

Southern sidewall samples were not collected as COGCC personnel found indications of significant impacts remaining along the southern sidewall (Photo 8). Additional excavation and sampling is required. Operator is required to notify COGCC prior to additional sample collection.

Environmental**Spills/Releases:**

Type of Spill: _____

Estimated Spill Volume: _____

Comment: Spill excavation is open (approx. 60x30x8); remediation Project #18594 was opened. As noted in the inspector comments section additional excavation is required.

Corrective Action: Request closure for Spill ID 479232 via Supplemental Form 19.

Comment: _____

Spill/Remediation:

Comment: One groundwater monitoring well had been installed on the northwestern corner of excavation. COGCC believes this well is upgradient or cross gradient of the release.

Corrective Action: Operator will install a sufficient number of monitoring wells to both characterize the extent of impacts to Groundwater and to determine the Groundwater gradient. Groundwater monitoring wells will be installed in source areas, and immediately downgradient and cross-gradient of source areas at a distance appropriate to determine the contaminant plume geometry. At least one monitoring well will be installed upgradient of the source. Additional monitoring wells may be required upgradient and cross-gradient of the contaminant plume to completely define the extent of impacts and to demonstrate the Point(s) of Compliance ("POC") with Table 915-1 and WQCC Regulation 41.

Date: 07/21/2021

Operator will provide notice to COGCC EPS Kari Brown (kari.l.brown@state.co.us) at least 48 hours prior to backfill, installation of monitoring wells, or any sampling events performed on location. Note that samples collected must be analyzed for Table 915-1 parameters
