General Comment:

On 5/31/2022, Reclamation Specialist O'Malley conducted an interim reclamation and stormwater inspection at TEP Rocky Mountain LLC's McLin A Pad Location #421223 in Garfield County, Colorado. This is a follow up to inspection #702800110.

The following compliance issues were observed during this inspection:

- Noxious Weeds & Undesirable Plant Species
- Stormwater: erosion/slumping of reclaimed areas

Refer to the "Location," "Reclamation," and "Stormwater" sections of this inspection report for additional details.

Refer to the photo-documentation of the observed compliance issues attached to this report.

Any corrective action(s) from previous inspections that have not been addressed are still applicable.

A follow up inspection on this site will be conducted to ensure the compliance issues have been corrected to comply with COGCC rules.

Type	WEEDS		
Comment:	<p>Previous inspection #702800110 observed undesirable plant species/weeds on the interim areas and accumulating on the Location. Inspector required Operator to comply with Rule 606 by 4/13/22. Operator submitted FIRR indicating CA Completed.</p> <p>It was observed in this inspection that the previously referenced weeds and weed debris have been removed. Original corrective action has been addressed. New growth of undesirable plant species and noxious weeds was observed including whitetop and Russian knapweed (List B Noxious) at the north of the Location and throughout, kochia and Russian thistle (widespread in interim areas) and bindweed, cheatgrass and bulbous bluegrass (List C Noxious).</p>		
Corrective Action:	<p>Conduct weed management to prevent further establishment and spread of Undesirable Plant Species and Noxious Weeds; ongoing weed management required until location passes final reclamation.</p>		Date: 06/10/2022

Comment

It was observed in this inspection that areas of the Location not necessary for production operations have been reduced and reclaimed. Seed and hydromulch were present in the interim areas. Grass germination was only evident to the east of the Location, where seed rows were also observed. Germination appeared patchy, and undesirable plant species and weeds were widespread. Refer to the "Location" section of this report for corrective action regarding weed control.

Comment: It was observed in this inspection that a straw wattle has been installed around the perimeter of the Location interim areas. In gently sloped areas, the wattle is presently in proper functioning condition and is sufficient to manage sediment laden stormwater runoff on the Location. However, at the northeast corner of the Location control measures to allow for sediment-free stormwater discharge, and to protect and stabilize the Location are missing or insufficient. Rill and gully erosion is present in the interim area, below which the fill slope has slumped. Erosion is widespread in this area and is contributing to onsite and offsite degradation.

Corrective Action: Install or repair required BMPs per Rule 1002.f. Continue to monitor and manage stormwater on the Location. Ongoing stormwater management is required until the site receives a passing final inspection.
