General Comment:

This inspection is in response to a reclamation complaint. Refer to the Complaint, Environmental and Reclamation sections for more details.

This is also a Final Reclamation and Stormwater Inspection for PA Well API #075-05621 that was plugged and abandoned on 04/22/2019.

Any corrective actions from previous inspections are still applicable.

Complaint

Comment: [Complaint: #403201074](#)
[Field Inspector Assigned: Dylan Edwardson](#)
[Location ID: #312143](#)
[Inspection Document: #696105548](#)
 Nature of complaint: Complainant had concerns that the location including the access road, well site, and pit have not been reclaimed. Access roads have not been removed, pit has not been recontoured or graded, piles of unknown material origin have not been removed/properly disposed of, undesirable vegetation on the location, and fencing/gate remain at access points.

Corrective Action: [Refer to Environmental, Reclamation, and Inspection Photos for Corrective Action information.](#)

Date:

Environmental

Spill/Remediation:

Comment: Remediation Project #13484 is still active and open. At the time of this inspection, the Operator has provided analytical results to determine the vertical and horizontal extent of the spill; these results remain non-compliant with the Table 915-1 standards. Composite samples obtained on 08/25/2020 illustrated high SAR, EC, and pH and subsequent confirmation samples obtained on 08/16/2021 contained elevated levels of inorganics in exceedance of Table 915-1 parameters (Doc #403180759). Additionally, an unidentified pile of material was observed on location, north end of pit, and needs to be sampled to analyze composition. Refer to attached inspection photos for additional information.

Corrective Action: Operator shall comply with 900 Series Rules. Determine vertical and horizontal extent of spill to establish points of compliance and conduct soil analysis with discrete sampling and photo documentation to provide in future Supplemental Form 27s and FIRR. Collaborate with the landowner to determine future crop plans in order to facilitate proper remediation and reclamation of subsoil and topsoil on location.

Operator shall comply with Rule 905.a.5. Collect and submit samples for waste characterization for the unidentified piles, referenced in attached inspection photos, prior to offsite disposal. Include analytical results and disposal manifests in FIRR and future Supplemental Form 27s.

Operator shall provide Environmental Group with a Form 42 (check "other" box and provide description of activity) to notify Environmental Protection Specialist when soil samples are being conducted for both the vertical and horizontal extent of spill and for waste characterization of the piles.

Corrective Action:

Date **07/22/2019**

Comply with Rule 1004. Collaborate with the landowner to determine mitigating measures that will allow reclamation work to be conducted in such a manner as to not interfere with agricultural activities or crop production. Provide documentation within the FIR Resolution form of when the corrective action work will be completed and provide date and documentation of coordination with the surface owner.

Operator shall submit a Form 4 with a Reclamation Plan for the entire location and must include language to route the form to the area Reclamation Specialist. Reclamation Plan Guidance Template is included in the 915.B guidance document.

Corrective action date is being back dated to when final reclamation activities should have been completed.

<p>Final Reclamation Comments.</p> <p>This location does not comply with Rule 1004. Reclamation rules require reclamation activities to be conducted within three months of plugging on cropland. Well was plugged 04/22/2019. During this inspection, COGCC Staff observed the following: the access roads and location were not properly de-compacted with evidence of gravel remaining throughout; undesirable vegetation (e.g. kochia); unknown piles of material, fencing and other debris has not been removed; the location and access roads have not been reclaimed (contoured/graded); and the disturbance area has failed to revegetate to reflect adjacent reference areas. The pit and location need to be remediated prior to reclamation, and weed management needs to be conducted throughout the location during remediation activities. The area identified in the inspection photos (access road and well location) needs to be reclaimed per landowner collaboration ASAP. Refer to the attached inspection photos for additional information.</p>	edwardsond	11/02/2022
