## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

**COA Type****Description**

	Operator shall include photo documentation of the surface areas, wellhead excavation and sample locations on the subsequent Supplemental Form 27.
	Operator shall field screen the four sidewalls and the 4 quadrants of the bottom hole. A soil sample will be taken at the location with the highest field screening/PID reading. Collect confirmation soil samples as described in the Rule 915.e.(2). Operator will analyze soil samples for TPH (C6-C36), Table 915-1 Organic Compounds in Soil, Table 915-1 metals, and Table 915-1 Soil Suitability for Reclamation (Electrical conductivity, Sodium adsorption ratio, and pH by saturated paste method, boron (hot water soluble)).
	The surface area disturbed by site investigation and decommissioning activities shall be reclaimed in accordance with the 1000 Series Reclamation Rules. For locations that will no longer have active oil and gas operations, Operator shall comply with Rule 1004 Final Reclamation requirements. Note: Approval of this form does not imply approval of Operator's proposed plan for reclamation.
	In order to meet the requirements of Rule 913.h, Operators will collect and submit for laboratory analysis a soil sample collected from the areas most likely to have been impacted during the operational life of the flowline. These areas include, but are not limited to: where Flowlines connect to the wellhead, surface equipment, risers, valves, or manifolds; where Flowlines were repaired in the past and at joints and hammer unions; where Flowlines connect to Flowlines or equipment of different material; and where Flowlines crossed drainages or surface water or are in contact with shallow groundwater.
	Operator has not provided a comprehensive list of all sensitive receptors located within 1/4 mile of the site. Operator shall update the relevant section on prior to resubmission.
