## Best Management Practices

### No BMP/COA Type

### Description

1	Wildlife	Eagle Buffer: This planned location is located within a bald eagle buffer. Operations will need to be completed outside the timing windows of 12/1 – 7/31 (eagle nest) and 11/15 – 3/15 (winter night roost). The eagle nest buffer window can be shortened if the nest has been confirmed fledge for the year by CPW. If work, is planned during either window, HSE will consult with CPW prior to operations beginning.
2	Wildlife	Mule Deer: Between 12/1 through 4/30, KMOG will only perform rig operations during daylight hours, Monday through Friday. KMOG access roads have speed limit restrictions that all personnel will follow. KMOG will shut down operations if an extreme winter storm is anticipated.

### Operator Comments:

KMOG is requesting approval to install temporary equipment on the CHARLENE NELSON 12-34HZ well pad inside the HPH. This pad has been drilled, frac'd, and turned over to production. The equipment will be used to cool produced oil from one well which is flowing at higher than normal temperatures. This sundry will entail installing (1) 500 BBL Frac Tank (for fresh water only) with Cooling Coils at least 75' from the well head. KMOG plans to set the tank and cooling coils on 12.4.2023 between the hours of 10AM and 2PM, and should take approximately 1-2 days to install. While the cooling operations will run 24 hours a day, the additional equipment is not expected to create sound, light, or visual impact. No mechanical motors are involved. Equipment will remain in place for less than 6 months. Colorado Parks and Wildlife (CPW) has reviewed and approved this operation. Please see the attached layout drawing, CPW approval email, and associated wildlife BMP's.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
