Subject: Concept to Consider for Setback Stakeholders

Thom,

I would like to see the Setback Stakeholders consider increasing the setbacks for drilling and completion and reducing the setbacks for production. I realize that it is not quite as simple as that because operators may come back to a well to do a recompleat. However most of the primary nuisance factors, such as noise, dust, lighting, etc. are more substantial during the drilling and completion operation compared to the production phase where the nuisance factors are generally minimal or nonexistent.
