## OPERATOR COMMENTS AND SUBMITTAL

### Comments

Distance to nearest well completed in the same formation / permitted or existing well penetrating objective formation was measured to the producing well Pucket 264-1 (API # 05-045-10842). Please see the BMPs attached to the Form 2A Location Assessment for this well pad. DISPOSAL PLAN: Solids control equipment consisting of shale shakers, centrifuges, and flocculating unit will be utilized to separate drill cutting solids from liquid (water). If cuttings meet Table 910-1 standards, they will be treated as soil, stockpiled on location and beneficially re-used on location or at another location as approved by COGCC Sundry Form 4. Any excess cutting will be transported to an authorized waste facility. Closed loop system will be used to separate solids from liquid. Dry cuttings will be stockpiled on location or transported off-site to an approved facility. Clean drilling fluids will be recycled and used in drilling operations at the next pad location.

### Description

	Open hole resistivity and gamma logs shall be run to describe the stratigraphy of the entire well bore and to adequately verify the setting depth of surface casing and aquifer coverage. On a multi-well pad, these open hole logs are only required on one of the first wells drilled on the pad and the Drilling Completion Report - Form 5 for every well on the pad shall identify which well was logged.
	1)Operator shall comply with the most current revision of the Northwest Colorado Notification Policy. See attached notice.  2)Operator shall comply with the most current revision of the Garfield County Rulison Field Notice to Operators, with the following exception: all field notice requirements specified in this notice to operators are superseded by the requirements of the most current revision of the Northwest Colorado Notification Policy (see condition of approval #1). See attached notice.  3)Operator shall provide cement coverage from the production casing shoe (4+1/2" FIRST STRING) to a minimum of 200' above all Mesa Verde Group (and Ohio Creek Formation, if present) oil, gas, and water-bearing sandstone and coalbed formations. Verify production casing cement coverage with a cement bond log.  4)Comply with all provisions of the June 12, 2008 Notice to Operators drilling wells within ¾ mile of the rim of the Roan Plateau in Garfield County – Pit Design, Construction and Monitoring Requirements. Permit	Removed distance to unit boundary, unit acreage, and unit configuration as per opr. Added "and other lands" to lease description with opr approval. Attached Exception Loc Request and Waiver to Order 510-21 as per opr. Final review complete.	4/9/2015 3:37:01 PM
Permit	Corrected Qtr/Qtr/Lot from Tract 93 to SENW as per opr. Corrected distance to nearest lease line from 2893' to 2265' as per opr. Ready to pass.	2/18/2015 11:11:57 AM
Engineer	Anticollision Report included with Deviated Drilling Plan does not include Puckett 22B2-1D (API#045-19932). The well has not been drilled and the permit for the well expired in 2012. Operator is to submit Sundry Form 4 to abandon the location. AL sundry processed 2/17/15.	2/12/2015 3:10:57 PM
Engineer	Offset water well check: COGCC evaluated offset water wells within one mile of this proposed well's surface hole location. This information was used in addition to locally-available hydrogeologic information to evaluate the adequacy of the operator's proposed surface casing setting depth. The deepest water well within one mile is 605 feet. The proposed surface casing setting depth is more than 50 feet below the base of the aquifer in which water wells are screened within one mile. The surface casing covers the entire Green River formation based on offset wells. Evaluated existing offset wells within 1,500 feet of this wellbore. Existing offset wells target the MVRD formation. No mitigation required.	2/12/2015 3:10:56 PM
