Alex,

I wanted to make sure that Engineering didn't need or wanted to take a look at the pipeline. Stuart called me earlier today and he concurred that Caerus could backfill the excavation. I have already talked to Jake Janicek and told him to proceed.

Thanks for your comments,
Carlos

Carlos- I don't really see a need for Engineering approval for backfilling the excavation. Engineering just

needs to be in the loop on line leak issues to tracking and documentation and root cause. If they have addressed issues to the Rules and 910-1 standards, I would think they could backfill the excavation.

Stuart- Correct me if I have misspoke.

Thanks
Alex

Stuart,

Caerus notified the COGCC of a spill on July 17, 2015. Investigation of the incident determined that a dump line leak was the cause of the spill.

Cleanup was completed and Caerus submitted confirmation results and request approval to backfill the excavation (see attached narrative and figure).

I am asking Caerus to hold on until I get a response from COGCC Engineering,

Facility name: Parachute Creek 5

Location ID #335781

Spill report doc #400870201

Spill/Release point ID: 442525

Spill coordinates: 39.528606, -108.130264

Legal description: NWNE 17 6S 96W

Please advise if Caerus can backfill the excavation now or if they should wait for Engineering approval, and if you need additional information.

Thanks,
Carlos

Carlos,

A Form 19 (Notice of Completion) was just submitted for the Parachute Creek 5 (Doc ID 400898838, Spill/Release Point ID 442525) release. Please review and let me know if you have any questions. We would like to start backfilling the excavation as soon as possible, so if you could review the data quick, I would appreciate it.

Thanks

Jake
