COGCC Comments

Comment	User	Date
There is a dominance of weed vegetation debris throughout the location (Russian thistle, Kochia sp.). The dominance of weed vegetation can inhibit the establishment of desirable vegetation and has created a buildup of dead vegetative debris which is a safety concern and can move off location into the adjacent pasture. This debris will need to be removed to allow for adequate reseeding. Weeds need to be controlled (e.g. mowed) to facilitate the establishment of desirable vegetation.	CostaR	10/13/2017
Establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture requested by the surface owner, or a mixture prescribed by the local county NRCS. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until Final Reclamation has passed.	CostaR	10/13/2017
A form 4 document number 401388299 was recently submitted for Final Reclamation Complete. This form was not accurately submitted and should not be submitted until compliance of the 1004 Reclamation Rules are achieved. The site does not comply with the Final Reclamation Requirements.
