Corrective Action: _____ Date **05/15/2018**

Perform reclamation in accordance to COGCC 1000 series rules, recontour/regrade access road, repair erosion degradation implement stabilization/stormwater controls on access road and location, and establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of pre-disturbance or reference area levels. Use a seed mixture requested by the surface owner, or a mixture prescribed by the local county NRCS. Ensure erosion controls are implemented to stabilize the seeded soil, and continue to monitor and manage this site until Final Reclamation has passed. Original CA date of 5/15/2018 remains applicable.

Overall Final Reclamation

Fail

Well Release on Active Location ☐Multi-Well Location ☐**COGCC Comments**

Comment	User	Date
<p>Previous inspection (doc. #667200207, #682503195) documented erosion degradation concerns on both the location and access road. Inspections required operator to re-contour/grade and reclaim the access road as well as to implement stormwater BMP's on the location.</p> <p>This location does not meet reclamation requirements and standards. Unable to find evidence that reclamation activities, or activities per the corrective action, have been conducted.</p> <p>Erosion degradation on the east end of the location remains evident. Desirable perennial vegetative establishment in accordance to COGCC 1000 series reclamation standards has not been achieved.</p> <p>Access road has not been recontoured/regraded to the adjacent lands and stormwater has continued to degrade and channelize the access road. Additionally, stormwater runoff from the access road has created a gulley leading onto the location and has contributed to additional stormwater degradation. This was also documented in the previous inspections (doc. #667200207, #682503195) and does not appear to have been repaired or stabilized. See attached photo document.</p>	trujilloam	08/01/2018
