Comment

Interim Reclamation was installed in Fall of 2017. Emerged desirable vegetation was noted though there is also a large population of tumble mustard rosettes infesting site. Stormwater concerns in Interim areas are developing which may wash out areas of vegetation; refer to Stormwater section for more detail. It is recommended that Operator conduct Vegetation assessment in 2019 growing season to determine progress of desirable species and if further reclamation activities are indicated (i.e. inter seeding).

Storm Water:

Loc Erosion BMPs	BMP Maintenance	Lease Road Erosion BMPs	Lease BMP Maintenance	Chemical BMPs	Chemical BMP Maintenance	Comment

Comment:	<p>There are erosion concerns at site affecting the interim reclamation. Stormwater is collecting at points just off Pad, discharging through Interim, cutting channels, washing out vegetation and ultimately moving sediment off site. Erosion is also occurring on Cut slope, affecting vegetation and washing sediment onto Location. Refer to photo log attached.</p>	Date: 05/03/2019
Corrective Action:	<p>Install or repair required BMPs per Rule 1002.f. Shorter CA date is given because of concern of Spring rains further exacerbating the erosion concerns at site. ASAP is recommended.</p>	

Pits: ☒ NO SURFACE INDICATION OF PIT
