Operator Comments:

909J sampling for Taylor 42-7 well was attempted on November 11, 2021 by an Evergreen Employee. Upon arrival to the location, the employee found the well to not be producing water. It was determined that the downhole pump is no longer operational, not allowing water to be produced from the wellbore at this time. Naturally occurring events, such as freezing events can result in line pressures changes, therefore causing damage on the downhole pump. These events are unpredictable for an operator. The Taylor 42-7 well last produced in September of 2021, which is after January 15th, 2021, the date that 909J regulations went into place. In September of 2021 the well stopped producing due to naturally occurring reasons prior to sampling was able to be completed. The well was last sampled September of 2000. These water quality results are attached. Evergreen intends to complete the 909J sampling requirements when the well begins to produce water, but Evergreen is unable to predict when that will be, as there are several variables out of our control.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
