COMMENTS:

This well started mitigation in November 2020. The bradenhead test conducted 11/05/2022 (Form 17 doc# 402558976) reported 121 psi. Following the previous period of abatement through the facility, Crestone has maintained the bradenhead pressure low but not quite below the threshold. Crestone has made slight adjustments to the tie-in in order to drop the pressure and maintain it below the threshold. It is believed that with the current setup, Crestone will be able to keep the pressure below the threshold. Charts are attached that show the pressure trend over the last 6 months. The bradenhead test conducted 11/4/2022 (Form 17 doc # 403224629) reported 42 psi and a total volume of 0.0498 MSCF, flown at an initial rate of 13.49 MCF/D, indicates additional mitigation is needed. Sample results show the bradenhead gas is near-surface microbial gas. It does not match the production gas. Crestone is confident in the efficacy of the bradenhead pressure abatement system and plans to continue with the current strategy. Crestone will conduct the next annual test in 2023 and provide an update on bradenhead abatement at that time.
